## **About this paper**

This report is part of the project 'When disasters and conflict collide: uncovering the truth', a collaboration between the German Federal Ministry of Economic Cooperation and Development (BMZ), Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) and the Overseas Development Institute (ODI). It also draws on research conducted for the project 'When disaster meets conflict' from the International Institute of Social Studies (ISS), Erasmus University Rotterdam, funded by the Netherlands Organisation for Scientific Research (NWO), VICI grant 453-14-013.

### **Acknowledgements**

The authors would like to thank everyone who contributed to the development of this report – including Shirin Agha Samim and Nematullah Wafa, for their valuable role as research assistants in Afghanistan, and the Afghanistan Research and Evaluation Unit (AREU) for their support. This report would not have been possible without comments and guidance from Adriaan Ferf and Erika Marques from ISS, Leigh Mayhew and Alice Caravani from ODI and independent researcher Hannah Measures. We are extremely grateful for peer review comments from Dr Aditya Bahadur, Laura Peters, Ria Hidajat and Dr Sandra Rubli. The editing and production process was managed by Matthew Foley and Hannah Bass.

Special thanks go to the interviewees who contributed their reflections and knowledge and provided materials – especially from the Afghanistan Resilience Consortium (ARC), the Coordination of Afghan Relief (COAR) and the Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ). We are grateful to the Afghanistan National Disaster Management Authority (ANDMA), without whose support and contribution this research would not have been possible.

Finally, our heartfelt thanks go to the people of Afghanistan, who endure daily disasters and conflict, for welcoming us into their stories and their lives.

## **Executive summary**

While technical experts and donors profess an ambition to adapt conventional disaster risk reduction (DRR) approaches to conflict contexts, they struggle to overcome the long-held perception that this is not a viable option. Conflict can undermine national disaster risk governance and the implementation of DRR strategies, and conflict contexts are often considered too difficult an environment in which to deliver DRR. In such conditions, disaster risk management is likely to be a low government priority, with action limited to protection and response. Afghanistan presents a contrasting picture, where a national strategy has been formulated and includes explicit consideration of the conflict environment, and where some local DRR interventions are linking with conflict prevention ambitions.

Afghanistan has been beset by numerous disasters in recent years, with a high toll of death and displacement. Thousands have been injured, killed or forced to flee their homes as a result of the country's longstanding conflict. DRR has become a major concern for international donors and the Afghan government over the past decade. This study explores how DRR initiatives and projects are being linked with conflict prevention, 'do no harm' principles and peacebuilding efforts to show that it is possible to mitigate against natural hazards while also seeking to reduce the risk of conflict. The study also strikes a note of caution that, while DRR is possible, it requires long-term, dedicated effort and continuous monitoring. Of particular concern is the scope of current DRR projects, as the tailored approaches required in remote disaster-prone communities do not easily allow for scaling up.

#### Learning from Afghanistan

Afghanistan is one of the most disaster-prone countries in the world, with nearly all of its 34 provinces affected by at least one natural disaster over the past 30 years. In 2018, the lives and livelihoods of more than 4 million Afghan people were threatened by floods, storms, droughts and landslides. This figure is almost three times higher than the number of people requiring humanitarian assistance on account of conflict. Meanwhile, after more than 30 years of armed struggle, the country has a low level of socioeconomic development, reduced governance and only basic capacity for disaster recovery and resilience-building. While some national policy documents articulate the importance of linking disasters with conflict, there is limited capacity to design and deliver relevant implementation strategies. Corruption, mistrust of the government and lack of transparent governance add a further layer of complication.

Afghanistan exemplifies many of the themes emerging from recent studies of DRR in contexts of conflict. Protracted conflict and state fragility have undermined disaster risk management and increased people's vulnerability to natural hazards. Furthermore, international attention has tended to focus on relatively accessible locations, largely neglecting what happens in areas where the state does not control territory. Another issue of concern is that different types of violence tend to be treated in the same way, which means that new opportunities or entry points for building disaster resilience may be overlooked.

The research highlights the need for approaches to DRR that consider the multiple and varied conflict dynamics in which they operate. State institutions and the international community tend to focus on the national level, whereas local-level manifestations of conflict can be much more important in terms of programme implementation. Failing to take account of local societal issues can mask the multiple causes of vulnerability, resulting in projects that may not adequately address the root causes of disasters. If not adapted to the local context, DRR interventions have the potential to cause or exacerbate social conflict.

#### Towards a more holistic approach

In addition to revealing the complexity of working with conflict dynamics in Afghanistan, the study also illustrates a new trend in approaches to DRR. While previously hazardfocused infrastructure projects and responses to rapid-onset disasters were the norm, there is now a move towards explicit consideration of local resilience, with interventions taking a more holistic approach to intersecting threats and risks. A number of aid agencies have adapted their approach to DRR through a process of conflict analysis, centring on a commitment to 'do no harm'. Although not specifically oriented towards conflict resolution or peacebuilding, these approaches nonetheless can help reduce the risk of conflict. This change of tack has come in response to lessons from the past and current donor trends linking DRR with topics such as climate change, development and education.

The research also revealed a lack of consideration of intersectionality, or the ways in which power systems affect the most marginalised in a society. Uniform approaches to 'community' are coming under increasing scrutiny, with calls for more attention to different forms of vulnerability and how to make DRR policies more inclusive. An intersectional approach offers a more nuanced perspective than is typical in DRR programmes by taking contextual realities into account, and recognising that people experiencing marginalisation have different identities, needs and priorities. The study also calls for attention to the relationship between disasters and gender, climate change and urbanisation.

Afghanistan has taken significant steps to advance its ability to access and utilise climate finance. Although not always explicit, many interventions are enhancing DRR, including the adoption of early warning systems, but there is still a need to build institutional capacity to bolster those links; to work with international funding mechanisms to enable climate funds to be channelled to high-intensity conflict contexts; and to link programmes including adaptation and conflict and DRR components more closely with national policies on sustainable development.

#### **Recommendations**

DRR in Afghanistan is taking more account of the relationships between hazards, vulnerabilities and capacities. DRR is now being pursued both to 'do no harm' *and* to minimise conflict risk. These insights lead to several key recommendations.

## Build capacity and strengthen coordination

This includes strengthening local knowledge on the basic concepts of DRR, and deepening understanding of how disaster risks manifest and the interrelationships with conflict. It also involves developing remote monitoring technologies to overcome access issues. Encouraging donors to make conflict-sensitive processes compulsory in project design and delivery will facilitate the allocation of resources to training and building knowledge on conflict analysis. Inter-agency coordination and learning also needs to be improved.

#### Scale up action on DRR in a conflictsensitive manner

Understanding of and action on climate and disaster risk should be guided by explicit emphasis on the links between natural hazards, conflict and peace. There is a need to develop conceptual and operational approaches that improve the integration of DRR with actions relating to minimising conflict, and to move beyond short-term timeframes. Conflict analysis at various scales can be used to inform the design and delivery of national and local DRR strategies and plans. Stronger collaborations between disaster, climate and peace actors could bolster knowledge and mature programme design.

## Integrate learning from DRR and conflict into intersectional and climate change adaptation ambitions

Lessons from the DRR community should be better documented and shared to strengthen the evidence base and promote systematic inclusion of DRR and conflict in adaptation programmes. This could attract additional funding for DRR through climate finance and other sectors, helping governments to improve coherence between parallel strategies, each striving to support peaceful and sustainable development progress.

#### The evolution of DRR in Afghanistan

# The evolution of disaster risk reduction in Afghanistan

Selected key policy moments, events and legislation

1996

1988

Taliban regime

established.

#### 1997

The country was invaded by 80,000 Soviet troops resulting in a decade of violence as the Sovietsponsored regime failed to defeat the Mujahideen who opposed the occupation

1979

An extended drought believed to have begun in 1969 reached a critical state between 1997–2002, resulting in massive internal displacement, severe water shortage and crop loss, and the spread of various water-related diseases.

#### 1971

Department for Disaster Preparedness established as the national organisation directly working on disaster risk, under which the Afghanistan National Disaster Management Authority (ANMA) was established in the same year.

#### 2017

OCHA released its 2018–2021 Afghanistan Humanitarian Response Plan (HRP), seeking \$430 million to ensure timely response and save lives in areas of highest need.

After almost four decades of conflict and violence, the security situation in Afghanistan deteriorated; reclassified from post-conflict to active conflict.

### 2018

The Afghanistan National Peace and Development Framework (ANPDF 2017–2021) established with the aim to achieve self-reliance and increase people's welfare by constructing a broad-based economy and ending corruption, criminality and violence.

n?

Soviet Union agreed to withdraw troops and establish a neutral Afghan state. However, the agreement failed to settle differences between the government and the Mujahideen, resulting in another decade of civil war.

#### 2001

US-led invasion resulted in the fall of the centralised Taliban regime. Peace and reconstruction agreements led to a national constitution and elected national parliament.

#### 2014

Disaster Management Strategy (2014–17) established to expand coordination and collaboration within Ministry of Rural Rehabilitation and Development (MRRD) programmes.

The US and UK ended combat operations in Afghanistan and NATO formally ended its 13-year combat mission. Violence persisted across much of the country; 2014 was the bloodiest year since 2001.

#### 2015

Afghanistan endorsed the Sendai Framework for Disaster Risk Reduction 2015–2030.

A 7.5 magnitude earthquake affected northeastern Afghanistan, claiming 177 lives.

Flooding and avalanches affected more than 8,000 families and killed nearly 300 people.

Taliban representatives and Afghan officials held informal peace talks in Qatar. The Taliban insisted they would not stop fighting until all foreign troops withdrew.

#### 2003

National Disaster Management Plan (NDMP) established by ANDMA to try to streamline disaster management systems

at national level.

#### 2005

Afghanistan signed the Hyogo agreement. National Environment

Protection Agency established.

2009

Afghanistan's National

Adaptation Programme

of Action (NAPA) jointly

**Needs Self-Assessment** 

(NCSA), providing the

main policy document

on climate change.

developed with its

National Capacity

#### 2004 New constitu

New constitution ratified in an attempt to establish democratic government.

#### 2002

**O** 

First contingent of foreign peacekeepers – the NATO-led International Security Assistance Force – deployed.

The Afghan Red Crescent Society (ARCS) and Afghanistan's National Disaster Management Authority (ANDMA) signed a landmark memorandum of understanding to improve the government's legal preparedness for international disaster response.

The current National Disaster Management Law enacted to regulate activities related to disaster response, preparedness and risk reduction (both natural and manmade). ADNA became responsible for the regulation and coordination of disaster response activities and enforcement of the Disaster Management law.

National Disaster Management Commission (NDMC) established.

8

#### 2006

NATO assumed responsibility for security across Afghanistan.

#### 2007

The foreign ministries of Afghanistan, Bangladesh, Bhutan, India, the Maldives, Nepal, Pakistan, and Sri Lanka established the South Asian Association for Regional Cooperation (SAARC) Food Bank to address regional food scarcity.

#### 2008

Afghanistan identified as a droughtrisk hotspot with conditions certain to deteriorate over the next 20–30 years (Government of Afghanistan, 2011)

Afghanistan National Development Strategy for Security, Governance, Economic Growth and Poverty Reduction (2008–2013) launched.

#### 2010

National Disaster Management Plan (NDMP) established, with aims to implement by 2015 the National Disaster Risk Reduction Plan and the National Disaster Response and Recovery Plan.

A memorandum of understanding signed between Turkey, Afghanistan and Pakistan to establish an effective framework for disaster management cooperation.

#### 2011

The Strategic National Action Plan for Disaster Risk Reduction: Towards Peace and Stable Development (SNAP) produced, aiming to create a safer and more resilient Afghanistan by lowering the risk of future catastrophes and climate change impacts.

Afghanistan committed to joint disaster preparedness and response efforts under a new South Asian Association for Regional Cooperation (SAARC) Agreement on Rapid Response to Natural Disasters at the 17th annual SAARC summit.

ODI is an independent, global think tank, working for a sustainable and peaceful world in which every person thrives. We harness the power of evidence and ideas through research and partnership to confront challenges, develop solutions, and create change.
