¹ A hay box is a wooden or cardboard box packed with a good insulating material such as hay (dried grass), an

old blanket, silk cotton, or some similar material, in such a way that a space is left in the centre of the box for a cooking pot. Food is brought to the boil in a metal or clay cooking pot, and when both the food and the pot are very hot indeed, the whole thing is transferred to the hay box and closely packed around with the insulation material. If the hay box is an efficient one, where no heat escapes, food will continue to cook in its own heat until it is cooked, and will keep warm long after that.
